

MORELLO

FACTORY MATERIAL HANDLING TECHNOLOGY

TROLLEYS AND SELF-PROPELLED INDUSTRIAL TRAILERS
LIFTING TABLES AND TIPPERS
EQUIPMENTS AND WHEELS

Since 1946 MORELLO Company has been involved to solve problems related to the transportation and handling of materials inside of any type of firms.

Placed in a geographic area that since the end of XIX century has been studying and diffusing all over the world the most advanced technologies, MORELLO Company has acquired and enforced in its manufacture the best ideas springing from this technological environment through the will and interest of its engineers and workers, specialized in mechanics, carpentry, hydraulics, electronics, pneumatic and of its marketing and administration employees.

At the constant service of its Customers, MORELLO Company offers both standard solutions and solutions specially conceived to solve specific and complex handling needs: for this aim MORELLO Company is equipped with most up-to-date information technology systems.

MORELLO Company manufactures a wide range of trucks and industrial trailers that operate in most several fields: shipyards, iron, metallurgy, automotive, paper mills, chemical plants, energetic, aeronautic, aerospace industries operating in buildings, ports and airports prefabrication, etc.

At completion of the above mentioned production, MORELLO Company plans and builds lifting platforms, tippers and equipments studied to meet Customer's specific production flow.

MORELLO Company employees direct their efforts to give prompt answers, reliable products and high quality performances, early deliveries and an efficient after-sales service at disposal of all existing and future Customers of MORELLO Company

TIRED DIESEL SELF-PROPELLED TRAILERS

CAPACITY LOADS UP TO 1000 t

SGD VCP4 E 150/3

150 t – 12000 x 6000 x 1650 (2250) mm
Naval structures handling

SGD VCP4 E 100/4

100 t – 16500 x 10000 x 850 (950) mm

Naval panels handling

To handle any type of load, also huge and heavy and also in presence of limited places. For this aim it is possible to employ, if required, electronic steering systems and other configurations represented on the following pages.

Ground and slopes irregularities are get through hydraulic compensation of axles.

On request, it is possible to equip these systems with **remote control** or **self-acting translation (AGV)** at inertial control.

With huge and heavy loads it is possible to employ more systems simultaneously, mechanical jointed between them or placed apart.

As these self-propelled are set each one for a specific use, the project is made in function of all the User Client's demands.

SGD VCP4 E 60/3

60 t – 18000 x 5000 x 150 (550) mm – Wire driven (AGV)
Low pallets handling

**SGD VCP4 E 60/3**

60 t – 14000 x 3500 x 1000 (1600) mm
Pallets handling

MAIN TECHNICAL FEATURES

- Thermic engine at diesel cycle
- Hydrostatic transmission
- Leveled lifting of load platform on the self-loading self-propelled, by means of hydraulic suspensions with high path of lift, that guarantee a correct load distribution on each wheel, even in extreme conditions.
- Steering determined in mathematical model
- Possibility of electronics loading platform steering and lifting
- Possibility of mechanic or distance coupling: modular self-propelled machines
- Wide range of accessories

**SGD VC 40/2**

40 t – 7500 x 2200 x 1000 mm
Thick slabs handling

**SGD VCP4 E 40/2**

40 t – 13000 x 2500 x 1200 (1700) mm
Pallets handling

SPECIAL SERIES**SERIES SGCAI E****Transformers handling system with capacity load up to 190 t**

The handling system is formed by a master truck and a service truck.

The **master truck**, of self-loading type, is suitable in height handling and to transformers translation on tamped and leveled paving, in particular it has also the possibility to make translation of 90° respect to the normal side.

The **service truck**, equipped with current generator at diesel cycle, supplies electrical feeding for it-self and for the master truck. Its necessity derives from the dimensions specially low of the master truck and for this reason the impossibility to apply on board storage batteries or other energy sources.

The translation control for both trucks has made by means of two remote controls.

TIRED BATTERY ELECTRONIC SELF-PROPELLED TRAILERS

CAPACITIES LOAD UP TO 125 t

SGAI - VSF 25/2

25 t – 6500 x 2500 mm

Iron and steel handling products

Tired battery electronic self-propelled have been conceived and built for their utmost working flexibility.

They represent the best solution for all those appliances with delicate handling problems in limited places.

Manoeuvring easiness make them perfect to meet the most important requirements: i.e. when place is very limited and paths are strictly constrained.

The design of each self-propelled is preceded by a preliminary study about specific necessities of user and consequent use conditions.

On request it is possible to fit out these equipments with remote control at self-acting translation (AGV) at inertial control.

To handle any type of load even if in presence of limited places.
To operate in limited places a series of steering trailers are available with centre-corrected roof, to reduce at the minimum curvature radius.

To handle loads whose centre of gravity is high and off-centre, are available steering trailers on telescope supports instead of on fifth wheel.

To operate on bumpy floorings trailers may be equipped with super-elastic or pneumatic tyres.

Further to handle special loads, MORELLO Company has conceived trailers with distinguished features, with superstructure or shapes suitable to solve Customer's transportation problems.

MAIN TECHNICAL FEATURES

- Steel plate, wooden or open loading platform
- Solid, super-elastic or pneumatic tyre wheels
- Simple or centre-corrected roof steering; on fifth wheel or on turning telescope supports
- On request it is possible to employ: braking system, lighting system, superstructures, side panels, fixed or movable covering, columns to control load, spring or hydraulic suspensions

FOR PALLETS LIFTING AND TRANSPORT

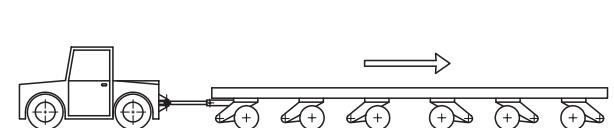

CAPACITY LOADS UP TO 450 t

SERIES VCP4 E

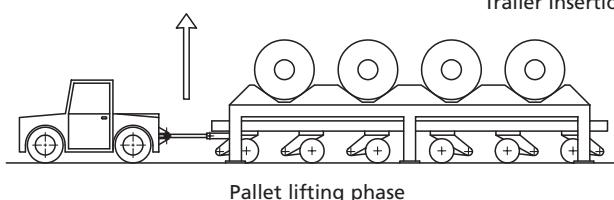

This series machines, used above all in naval and iron areas, have been conceived to manage the temporary material pause without the constant engagement of various types of trailers.

Dimensions and capacity loads are in analogy to those of diesel self-propelled on page 6-7.

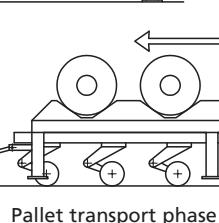

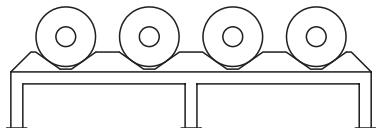

Example of pallet handling

Trailer Insertion phase under pallet

Pallet lifting phase

Pallet transport phase

SPECIAL SERIES

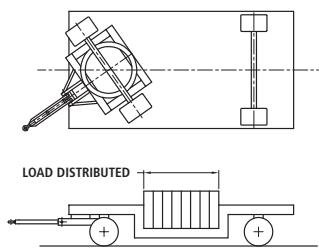

LOAD PLATFORM LOWERED

CAPACITY LOADS 8-25 t

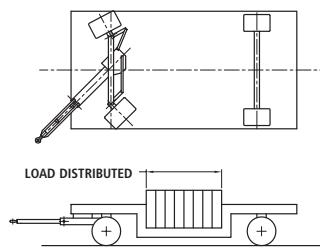

This series is particularly indicated to transport load whose barycenter is positioned at a considerable height, as: particular machines, ladles for steel mills, steel structures, etc.

HARBOUR EQUIPMENTS

PLATFORM-TOWS WITH ROLLTRAILER SYSTEM

CAPACITY LOADS 25-160 t

**SRP1 50/1**50 t – 10000 x 3500 mm
Harbour handlings

To handle containers or any type of load

- In harbour areas.
- On ships Ro-Ro.
- Inside manufacturing plants.

MAIN TECHNICAL FEATURES

- Steel, wood or day loading platform.
- N. 2 or 4 hunting axles disposed on one or two axis section; on each axle are assembled n. 2 wheels rolling on adjustable conical roller bearing.
- The longitudinal axles and rocker arms oscillate on greased bushings of sea type.
- Front space for platform-tow handling with gooseneck.
- N. 2 safety hooks for coupling with gooseneck.
- Etching-handing cables/chains.
- Coupling points for platform-tow handling by crane.
- Painting with two hands of primer and two coats of enamel with colour at choice.
- **On request** it is possible to have:
 - opening, including tubular steel sections, for handling trailer elevator forks
 - pockets for steering columns of load containment
 - foldaway centerings for containers fixing, positioned on the four corners of the rolltrailer
 - super-elastic or pneumatic wheels
 - special capacity load and dimensions
 - fixed gooseneck

- n. 2

Containers handling of 45' – 40' – 20'

To handle containers of 20' – 30' – 40' – 45'.

- In harbour areas.
- On ships Ro-Ro.
- Inside manufacturing plants.

MAIN TECHNICAL FEATURES

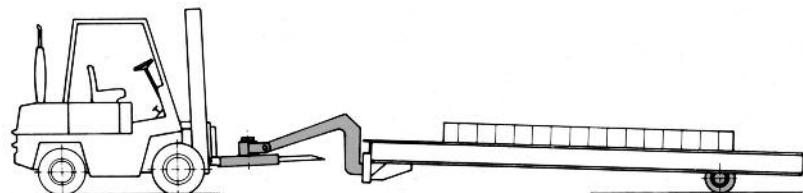

- Loading platform including suitable "raisers" at chute in steel (lateral and of head) to facilitate loading operations and containers centering.
- Gravity locks, applied on the loading platform, suitable to avoid containers movements during translation phases.
- N. 1-2 or 4 hunting axles disposed on one or two axis section; on each axle are assembled n° 2-4 wheels rolling on adjustable conical rollers bearings.
- Tyres: pneumatic, super elastic, or solid rubber.
- Possible longitudinal rocker arms oscillate on greased bushings of sea type.
- Wheels hubs covering is foreseen in steel caps/cover powder.
- Coupling height with the tractor: 1220 mm.
- Coupling pin with tractor of 2", realized in hardened steel positioned at 400 mm approx from the front head.
- Front landing gears adjustables manually in height, for the trailer parking; type with lateral leverage.
- N. 4 points for lifting by crane.
- Rear bumper.
- Rear access ramp.
- Rear and lateral reflectors.
- Coupling possibility with every suitable tractor.
- Painting with primer and enamel.

CARGO TRAILERS

PLATFORM-TOWS WITH ROLLTRAILER SYSTEM

CAPACITY LOADS 5-40 t

SYSTEM ADVANTAGES

1. It is not necessary the purchase of an expensive tractor.
2. It is extended the forks lift truck versatility, amortizing expenses more quickly.
3. The gooseneck allows to handle easily the platform compensating to the more expensive steering systems.
4. It guarantees an extreme security with the employ of a single operator.

HANDLING

- It is assured the gooseneck to the lift tractor forks.
- Lift tractor forks are lifted and the gooseneck extremity is inserted into the suitable platform seat. Coupling is made in self-acting mode and it results extremely safe.
- Platform lifts at 150 mm approx from the ground and the handling starts.

GENERAL FEATURES

TECHNICAL DATA

Frame and stressed skin structure in electro-welded steel section with suitable resistance to static and dynamic stress.

Loading platform in steel plate smooth or striated, in wood of larch or beech or "at day".

Wheels in solid tire, rolling on adjustable double conical roller bearings, with high performances for oil and wear.

Painting with primer and finishing with yellow synthetic enamel. Woods parts are treated with linseed oil.

EQUIPMENTS ON REQUEST

Special dimensions and capacity loads.

Superstructures of special molds to apply to the loading platform.

Capacity load 140 t
Iron ladles handling

To handle any type of load, also very big and heavy, on a run time constrained.

They represent, therefore, the best solution in case of production run should be regular for long periods.

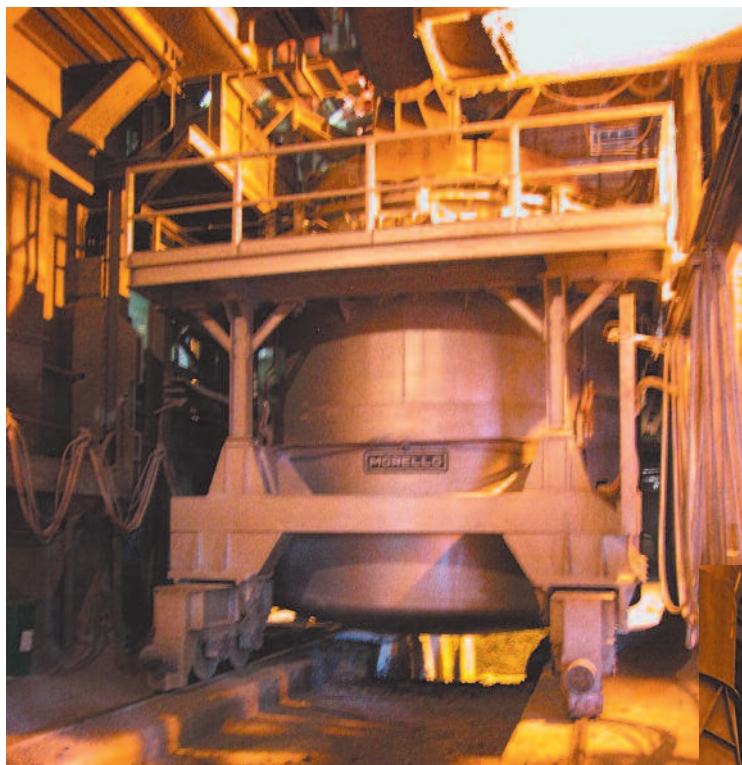

Further, their cost, in equality to dimensions and capacity load, it is lower than tired self-propelled trailers which must dispose of steering systems and more raised powers.

The most common uses are:

- Connection of several bays of an industrial buildings.
- Connection of a building with a store yard.
- Connection of an equipment with a department.
- Lightening bays cranes' work.

TECHNICAL FEATURES

- Alternating current motor, direct current motor, thermic at diesel cycle, pneumatic.
- Steel wheels for translation on every kind of rail.
- Control through fixed push-button panel (on board or on floor), with radio control or translation self-acting management.
- Electric or electronic translation management.
- Power supplied by the factory electrical net, from a battery, by gas oil in case of diesel engine, by the factory air-system in case of pneumatic engine.
- Parking and service brake.

SELF-ACTING SYSTEM FOR COILS HANDLING

Plant in subject is able to handle coils, of 30 t max of weight, in full self-acting mode (without operators following trailers). In particular, the self-acting handling can be made in the stocking area to the four process lines and vice versa and by means of any process line to another.

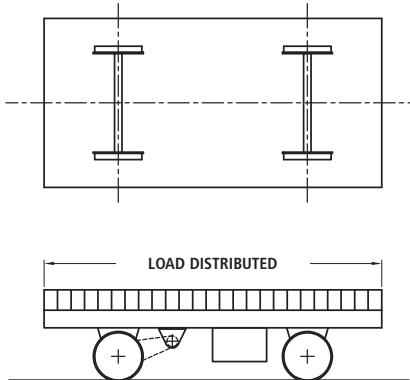

System is essentially formed by:

- n. 1 self-acting industrial trailer at storage battery and self-propelled trailer on rail, series SBA 6R
- n. 1 self-acting industrial trailer self-loading, at alternate current and self-propelled trailer on rail, series SBR 4R
- n. 4 self-acting industrial trailers, at alternate current and self-propelled trailer on rail, series SBR 6R
- n. 2 fixed stalls
- n. 1 main control site with operator panel
- n. 4 line control site with operator panel
- Safety system anticollision realized with scanner laser with programmable intervention area

Industrial trailers **Self-propelled trailer on rail at self-acting handling** allow concrete exercise economics consequent to the full and continual employ without the operator intervention during translation.

Established by two to n load or unload stations, from anyone of these, the trailer can be forwarded to another one of the others with the only button pushing, or by means of a radio control.

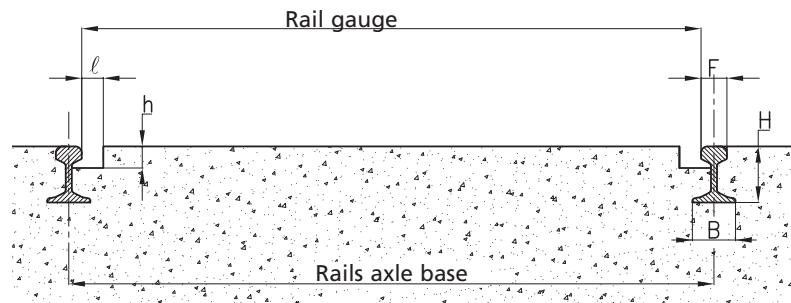

This trailers series allows a great flexibility in all manufacturing sectors.

SBR 4R Self-acting

RAILS FOR SELF-PROPELLED TRAILERS ON RAIL

Capacity load, gauge, length on request

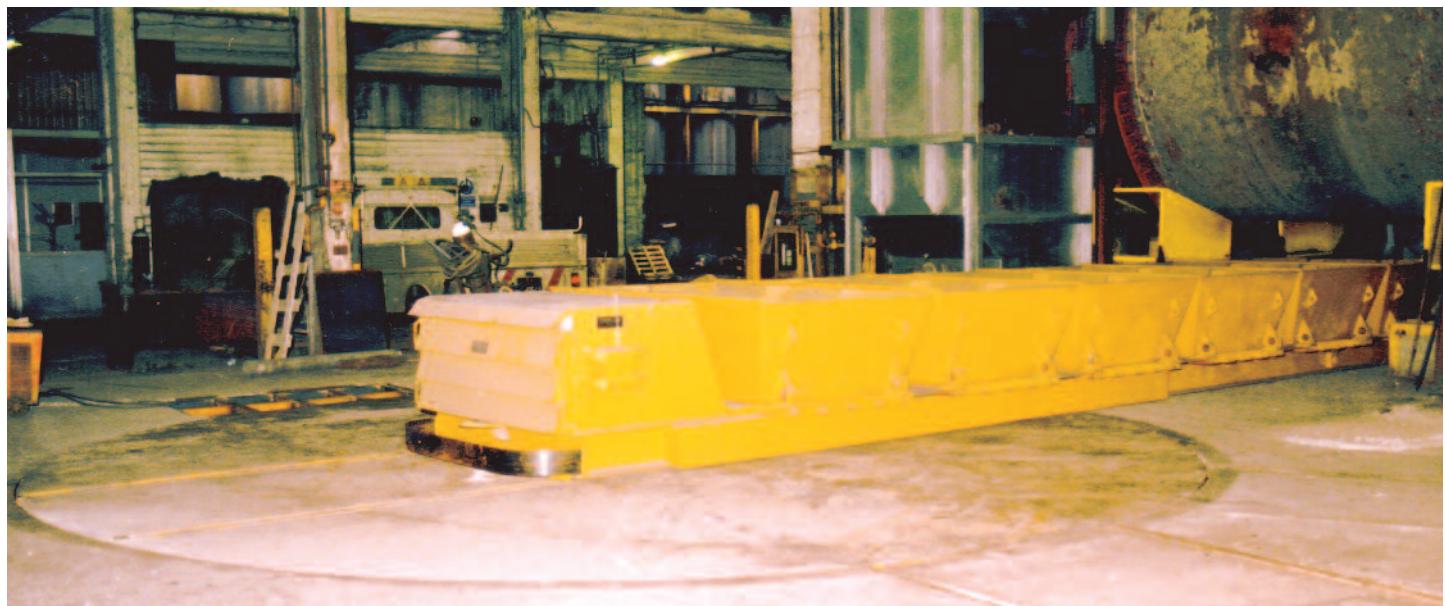

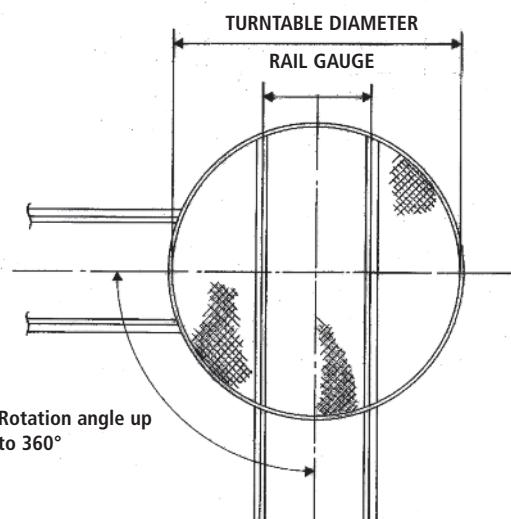

TURNTABLES WITH RAIL

Capacity loads and dimensions on request

In case the trailer run translating on rail should suffer a sudden deflection it is necessary to insert a turntable to imbed into the paving, as it is no possible to realize the same deviation with a normal rails radius of curvature variation.

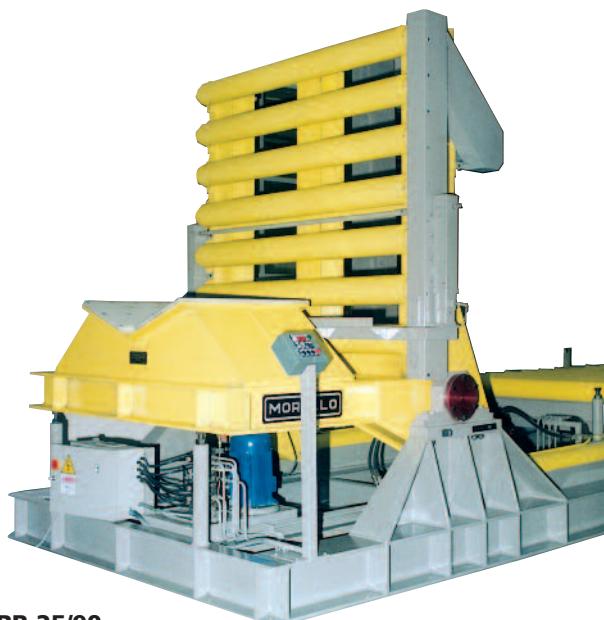

The turntable handling can be manual, electro-mechanic or electro-hydraulic, in function of capacity load and dimensions.

Dimensions and capacity loads are on request.

90°-140°-180° TIPPERS

LIFTING PLATFORMS

CAPACITY LOADS UP TO 350 t

PE F 2,5/X

2,5 t – 8500 x 2500 x 550 (2350) mm
Aeronautical constructions handling

To lift any kind of load in easy way, functional and safe. The lift platforms employ has been diffused to all the manufacturing sectors with consequent reduction of work times and reduction of production costs.

Their engineering and construction is made with the most advanced mechanical and modular oil-dynamical principles

MAIN TECHNICAL FEATURES

- Frame load in steel plate smooth or striated
- Structures suitable to resist to static and dynamic stress
- Parachute safety valves
- Electrical or pneumatic feeding
- On request it is possible to have:
 - safety railing to apply to the frame load
 - easement pallets
 - translations wheels

PE 30/X

30 t – 6000 x 1000 x 1300 (2300) mm
Military landings handling

PE/SP 2/DX

2 t – 5000 x 2500 x 1600 (5800) mm
Cars handling

**PE 12/X**

12 t – 5600 x 1400 x 800 (2450) mm
Iron components handling

**PE 5/TX**

5 t – 3800 x 2000 x 1000 (6150) mm
Mobile equipments handling

**PE SR 15/DX**

15 t – 2800 x 2000 x 1050 (3950) mm
Self-propelled trailer for coil handling

**PE 3/DX**

3 t – 2500 x 1300 x 1300 (4100) mm
Pallets loads handling

LIFTING PLATFORMS

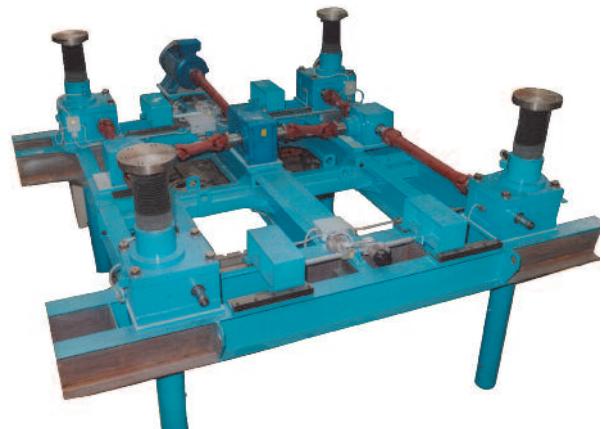

Tired equipments lifting system

Capacity load 10 t
Upstroke 1800 mm

Railways trolleys lifting system

Capacity load 25 t
Upstroke 1600 mm

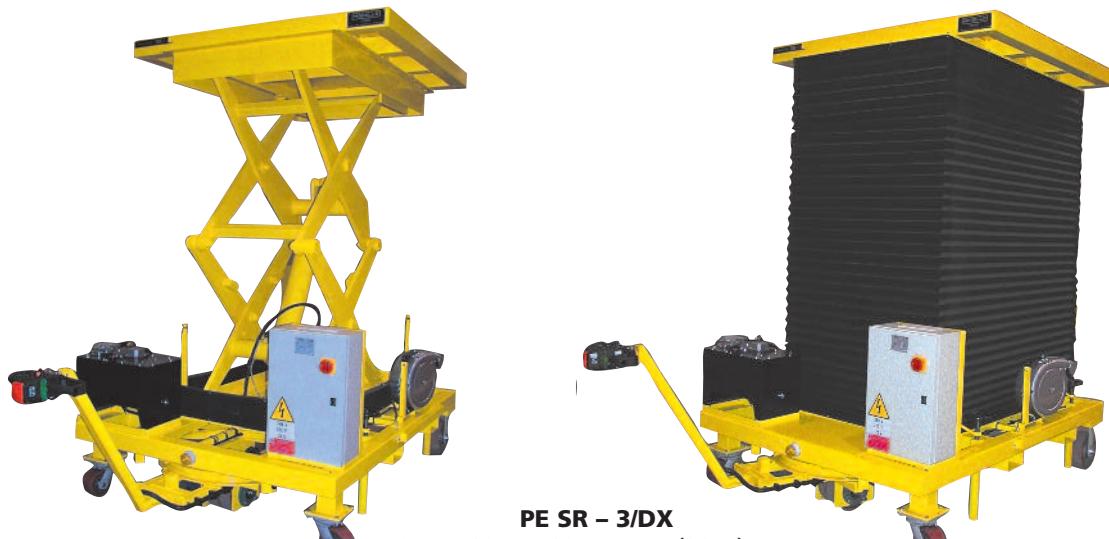

PE 300 VSF

300 t – 5000 x 4500 x 2000 (3800) mm
Landles with zinc handling

LIFTING PLATFORM SCHEME

HANDLING EQUIPMENTS

TO HANDLE DIES, COILS, SPECIAL LOADS, PRODUCTS IN FAST AND SAFE WAY

Load-dies self-propelled trailers on rail

Capacity load 30 t

For loading and unloading of big dies on presses

Handling dies load with crane

Capacity load 30 t

For load and unload of big dies on press

Load-dies with lifting load frame

Capacity load 30 t

For loading and unloading of big dies on presses

HANDLING EQUIPMENTS

Lifting system at panthograf

Applied at crane

Transporters belt trippers for iron industries

Dimensions and capacity loads on request

Self-propelled crane

Capacity load on request

Various materials handling

Electrical or diesel motorization

Load-dies with frame load at needles

Capacity load 45 t

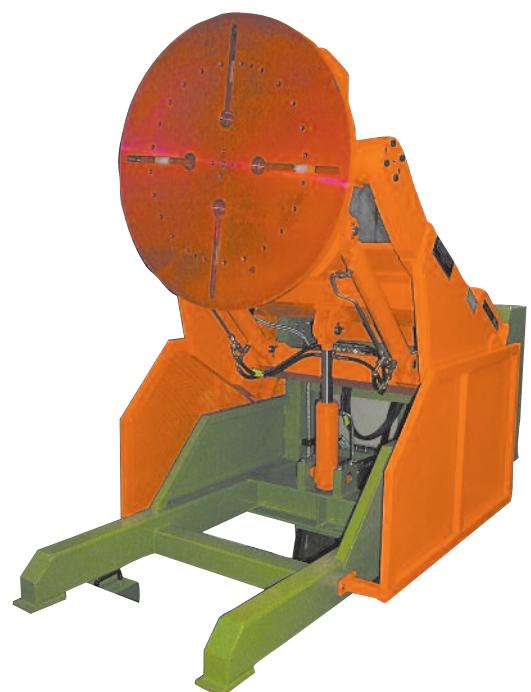

For loading and unloading of big dies on presses

Tired tractor

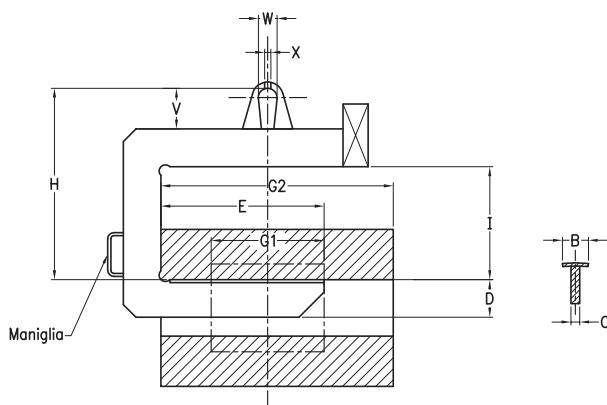

Handling idles trolleys on rail
with max capacity load 230 t

**Railways vehicles hoisters**

Capacity load 12,5 t /each one
Others capacity loads on request

**Placement pieces system**

Capacity load 6 t
Frame load diameter 1700 mm
Handlings: rotation, lifting and tilt

CROSS MEMBERS FOR LIFTING**Capacity loads and dimensions on request****Cross members for lifting**Capacity loads up to 40 t
At fixed and adjustable axle base

SPARES PARTS AND ACCESSORIES

MAIN SPARE PARTS NORMALLY AVAILABLE OR READY IN A SHORT TIME

Steel railway wheels

Weight capacity from 250 to 50.000 kg

Wheels Gran Carico in solid tire

Weight capacity from 600 to 15.500 kg

Super-elastic rings in solid tire

Weight capacity from 250 to 11.000 kg

Pneumatic wheels

Weight capacity from 400 to 20.000 kg

Vulkollan wheels

Weight capacity from 200 to 15.000 kg

Vulkollan rings

Weight capacity from 200 to 15.000 kg

Cushion rings in solid tire

Weight capacity from 200 to 13.000 kg

Ball or needle bearing fifth wheels

Weight capacity from 0,75 to 500 t

Trail eyes for towing rudder

To tow up to 500 t

WHEELS AND AXLES FOR TRAILER AND INDUSTRIAL TROLLEYS

WHEELS SERIES GRAN CARICO

WEIGHT CAPACITY UP TO 15,5 t

Wheels, supports and axles of series Gran Carico have been conceived for employs extremely heavy and they result particularly indicated for the construction of trailers and trolley for factory material handling. They offer a great resistance to the abrasion, to the tearing and to the heat, and they present a good smoothness. Further, they have a good resistance to the compression permanent deformation and this property allows the employ when the load is applied in permanence for a long time.

CORE in electro-welded steel realized by a ring and by two or three flanges of suitable thickness. **On request** it is possible to realize it with a single central flange of high thickness for assembly on axles with brakes.

HUBS with ball bearings seats or at conical rolls. **On request** it is possible to realize with through hole with key seat for traction problems.

COVERING in solid tire with high performances for oil and wear.

Max **SPEED** 6 km/h.

WHEELS AND AXLES SERIES DECAUVILLE

wheels series Decauville in steel Fe 42/52, or in steel C40/45 hardened and tempered, are specially indicated for trucks and cranes construction that translate on rail.

They offer an high mechanical resistance, also in presence of possible overloads, in union with a low rolling coefficient.

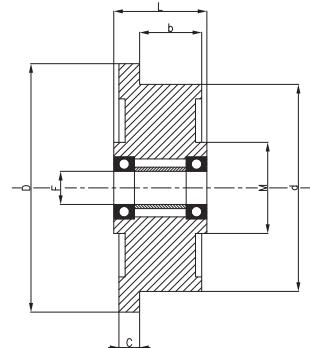

UNTIED WHEELS SERIES DECAUVILLE WEIGHT CAPACITY 600-50.000 kg

CORE in steel with high mechanical resistance

HUB with ball bearings seats or at conical rolls. On request it is possible to realize it with through hole for traction problems.

Max SPEED 7 km/h

ON REQUEST it is possible to built them without flat band, with double flat band or with triangular groove for translation on angle iron.

AXLES SERIES DECAUVILLE WEIGHT CAPACITY 1,2-100 t

Wheels series Decauville can be also supplied, on request, assembled on strong axles with gauge.

On purchase order phase it is necessary to specify requested weight capacity, wheels diameter desired and gauge.

SUPER-ELASTIC RINGS (SOLID TIRES)

Super-elastic rings replace the traditional tires in case the work area could cause frequent punctures, breakings and burstings to tires.

As super-elastic rings are free from punctures and burstings, they reduce maintenance times further those of truck stop. They offer long life, excellent stability also on slippery roads, tread with more high groove and a running comfort almost similar to air tires .

Further they are assembled on the same rims of traditional tires.

TIRES WHEELS

Tires wheels are employed above all for transport of breakables loads on irregular pavings or in tamped earth, assuring the max protection against impacts and vibrations.

They offer an excellent **comfort** and an excellent **silentness** during the employ.

UNTIED WHEELS SERIES ELASTOMER POLYURETHAN

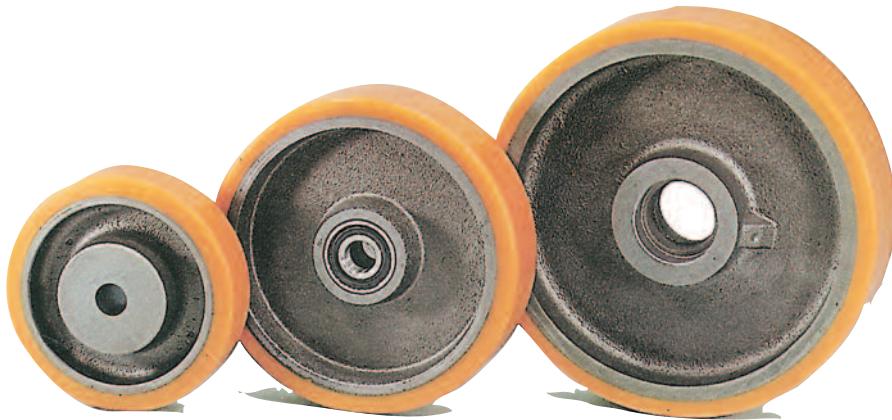

WEIGHT CAPACITY 160-5000 kg

CORE in steel or in mechanical cast iron smelting.

HUB with bearings. On request it is possible to realize with through hole with key seat for traction problems.

COVERING in elastomer polyurethan with excellent resistance characteristics to wear, tearing, oils and acids.

Max **SPEED** 6 km/h.

Wheels and supports with **elastomer polyurethan** covering are suitable to support very high loads, surfaces and of consequence, they result particularly indicated in trolleys and trucks constructions for factory material handling.

They offer a strong hardness and resilience, a special resistance to mechanic wear, a good resistance to temperatures (from -20° C to +80° C), an excellent resistance to oils, greases and chemical agents.

Special dimensions and weight capacities on request.

SOLID TIRED CUSHION RINGS

Solid tired **Cushion** rings are composed by a metallic ring with smooth surface named "gagger", covered by a tired band of suitable thickness named "covering", the tire-metal etching is realized and assured with the most modern technics of production.

ELASTOMER POLYURETHAN RINGS

Elastomer Polyurethan rings are composed by a metallic ring with smooth surface named "gagger", covered by an elastomer band of suitable thickness named "covering", the elastomer-metal etching is realized and assured with the most modern technics of production.

STEERING BALL-BEARING FIFTH WHEELS

Steering ball-bearing fifth wheels suitable for industrial trailers of little, medium and high weight capacity.
For trailers running with a speed lower than 20 km/h the axial load indicated increase from 30 to 50%.
